

NRD Cube Modernization

Contents

Background	2
POC Objectives.....	4
POC Scope	4
Success Metrics.....	6
Appendix	6

Background

The NRD reporting ecosystem was originally built on a **legacy OLAP cube architecture** running on SQL Server. Over the years, it has expanded to include **3,000+ metrics and dimensions**, becoming the backbone of reporting across the organization.

The cube is **primarily used by CXSO teams** to drive **strategic, operational, and performance reporting and analysis**. Business users rely on:

- **Excel** for recurring daily/weekly/monthly reporting and ad hoc analysis.

Formulas

However, this setup faces growing challenges:

- Heavy reliance on **legacy cube architecture** and **SQL Server**, which are difficult to maintain.
- **Long turnaround times** for enhancements and fixes, slowing down response to business needs.

POC Objectives

This POC aims to modernize the existing OLAP cube environment by evaluating cloud based alternatives that deliver faster performance, easier enhancements, and seamless integration with BI tools.

The focus will be on:

- Testing the feasibility of replacing legacy architecture with a cloud solution.
- Ensuring CXSO teams can continue their strategic, operational, and performance reporting without disruption.
- Validating that the new approach improves query response times, reduces dependency on manual fixes, and scales efficiently.

POC Scope

Representative Dataset

Out of 3,000+ total dimensions and metrics available in the current OLAP cube, we have curated a subset of 231 dimensions and 90 metrics for this POC. The selection was made based on actual usage data

- The 231 dimensions have 60% usage.
- The 90 metrics have 75% usage.

Together, this subset ensures the POC covers queries and reporting scenarios most used by business teams.

◦ Dimensions in Scope (Detailed Attribute List in Appendix)

Dimension Group	#Dimensions
Fiscal Calendar	66

Agent	96
Customer Account	18
Agent Tenure and Usage	25
Product Mix	16
Product Detail	10
TOTAL	231

o **Metrics in Scope (Detailed Metric List in Appendix)**

Metric Group	#Metrics
Agent AICR (VC)	3
Agent eShrink	1

Agent FCR 2

Agent Phone Activity Log	1
Call Counts	2
Call Times	2
Chat Counts	1
E36 Actions - ITG 2.	1
GSR and XSR Sell In Rates	2
GSR and XSR Units	5
Interaction Rates	1
Interaction Times	1
Interaction Transfer Out Counts	1

Interactions Handled Counts	4
Long Term Metrics	1
NBX Counts	3
Product Category Activity (XI)	3
Product Category Activity (XTV)	2
Product Category Activity (XV/Tracking/Other)	2
Retention Rates	3
Retention Utility Counts	3
RGU Participation Rates	3
tNPS Surveys (LTR - RepSat)	8
Work Order Adds	13
Work Order Changes and Rates	3
Work Order Counts	1
Work Order Drops	1
Xchange	2
Others	15
TOTAL	90

Dependencies

1. Platform Access & Accounts

- Help in setting up pipelines for Teradata to Snowflake data flow.
- Provisioning Snowflake accounts with appropriate roles.
- Service accounts for ingestion pipelines and ensure BI tool connectivity (Excel/Tableau/PowerBI etc.)

2. VS Code Access

- VS Code Enterprise costs around \$499 per user/month and is needed to view the SSAS packages.

3. Data Sources

- Access to all SSAS tables and dependent NRD tables required for POC execution

Recommended Architectures

To ensure scalability and flexibility, the POC will explore two approved approaches for processing and storing the selected dataset:

• Approach 1: AWS EKS + Teradata

- Processing performed on AWS Elastic Kubernetes Service (EKS).
- Processed data stored back in Teradata.

• Approach 2: Snowflake

- Processing and storage fully managed within Snowflake.

Tool Integration

Validate connectivity with Tableau & Excel

Success Metrics

The POC will be considered successful if it achieves the following:

1. **Replace OLAP Cube:** Demonstrate that a modern cloud solution can replace the existing legacy OLAP cube.
2. **User Experience:** Ensure the experience is the same or better than today for CXSO teams. Faster or instant query response compared to the current solution
3. **BI Tool Agnostic:** Seamless connectivity to Tableau, Power BI, Excel, Looker, BI Buddy, KPI Compass and any other tools.
4. **No Data Copies:** Direct processing without data duplication to avoid mismatch issues.
5. **Agility & Scalability:** Quicker creation and enhancement of metrics due to removal of SSAS dependency (Once the POC is completed, there will be 10 new dimensions & metrics that will be added to the scope & they should be reflected in the front end in less than a week)

QUESTIONS FROM SNOWFLAKE:

Below are questions that are important to answer to ensure a successful project.

- Can we (you) run our SNOWCONVERT utility on SQL Server to get an understanding of Source Code (SSIS)? Share current DDL, views, etc. (<https://docs.snowflake.com/en/migrations/snowconvert-docs/overview>)
- Can you document the actual data volumes (Size, Rows, Update Batch Schedules) with actual run times? (CDC and Full Loads)
- Can you supply a list of your top 50 queries against the SSAS / OLAP Cubes including number of executions, actual run times? (Excel pivot tables and Tableau dashboards your team uses daily)
- What is the user concurrency during peak times when accessing the cube through Excel?
- Are there any complex MDX measures? Please share a few examples if so.
